Education

University of Waterloo

Sept 2023 - Apr 2028

Bachelor of Computer Science (GPA: 3.92 / 4.00)

Waterloo, ON

- **Mathematics National Scholarship:** Awarded to 10 distinguished scholarship students in the Faculty of Math
- **Relevant Coursework:** Object Oriented Programming (C++), Algorithm Design and Data Abstraction (C), Logic and Computation (Enriched), Designing Functional Programs, Linear Algebra, Statistics & Probability, Calculus

Experience

Blackberry QNX

May 2024 – Aug 2024

Software Test Developer

Ottawa, ON

- Developed **Bash scripts and C programs** to test client patch requests for QNX utilities, covering **20+ customer use cases** in systems used by **over 2 million users**.
- Implemented **25+ test binaries in C** to black box test of QNX's PCI Server API, improving error coverage by **260%**
- Automated the testing of io-pkt, driver, and networking options for network test environment setup in QNX using **Pytest**, accelerating execution time by **99%**
- Engineered a **Python Selenium scraper** that scrapes backlogged Jiras from customer trackers, **scrapping 2000+ Jiras on each run** and eliminating the need for team members to manually search for Jiras in the backlog

Nokia

Jun 2022 – Aug 2022

Future Tech Intern

Remote

- Developed a library that caught **96% of failed deployers** during performance tests for Nokia's Network Services Platform using **Locust API and Python**
- Simplified performance test configuration by the number of JSON config files needed to run tests by **95%**
- **Eliminated need for manual Network Service management** on Nokia's NSP by engineering a Python program to automatically create, delete, and unmanage Network Elements using **REST API**
- Worked with an **Agile development team** and used project management tools like Jira to track progress

Projects

YouWriter | React, Flask, Python, OpenAI API, MongoDB, Figma

- Created a web app that converts YouTube videos into a text summary, **improving note-taking efficiency by 90%**
- Parsed and converted JSON transcript data to summary text using **API calls to OpenAI** from the Flask backend, delivering results to the user interface in **<400ms**
- Implemented a MongoDB login system and a **responsive React frontend designed using Figma**

Timeowt | JavaScript, Chrome API, HTML, CSS, Figma

- Designed and created a cat-themed **Chrome web extension** that blocks users from unproductive sites to eliminate distractions and boost student productivity
- Used **Chrome API and JavaScript** to implement an interactive popup window that enables users to change site blocking settings and store the changes automatically in Chrome's local storage
- Leveraged principles of UI/UX design by creating **Figma design prototypes** and implementing them into the popup and redirect page using HTML and CSS

IngredientSafe (Best Health Hack @ LunarHacks) | Python, OpenCV, JavaScript, HTML, CSS

- Developed an **interactive full stack web app** that automatically scans fine-print product labels and returns potentially harmful ingredients, to help simplify the task of reading labels for the aging and visually impaired
- Combined front-end interface with Python back-end that converts images to text, identifies allergens, and returns them to the user using the Pytesseract and **OpenCV** libraries
- Placed 1st in international hackathon with **100+ participants**

Technical Skills

Languages: Python, C/C++, Javascript, Bash, Processing, SQL, Racket, HTML, CSS

Frameworks/Technologies: React, Git, REST API, Pytest, Selenium, Flask, OpenAI, Linux, Jira, OpenCV, SVN, Locust, Chrome API, MongoDB, Postman, Figma
