

ANNIKA XU

a25xu@uwaterloo.ca | [Github](#) | [LinkedIn](#)

Education

University of Waterloo | Bachelor of Computer Science (3.92 GPA)

Sept 2023 - Apr 2028

- **Mathematics National Scholarship:** Selected as 1 of 10 distinguished scholarship students in the Faculty of Math

Skills

Languages: Python, C, Javascript, MicroPython, Bash, SQL, Processing, Racket, HTML, CSS

Tools and Technologies: Git, React, Locust, REST API, Pytest, Jira, SVN, Chrome API, Postman, Figma

Courses: Designing Functional Programs (Advanced Level), Elementary Algorithm Design and Data Abstraction, Calculus, Linear Algebra

Experience

Software Test Developer | C, Python, Bash, Pytest

May 2024 - Aug 2024

Blackberry QNX

- Tested **customer use cases** in patch requests for QNX utilities, developing Bash scripts and C programs as needed
- **Implemented 25+ test binaries in C** for PCI Server API black box testing, **improving error coverage by 260%**
- Automated the testing of io-pkt, driver, and networking options for network test environment setup in QNX using Pytest, **reducing test execution time by 99%**
- Created a scraper using Selenium and Python to eliminate the need to manually search for Jiras left in the backlog

Future Tech Intern | Python, REST API, Linux Command Line, Locust API, Postman

Jul 2022 - Aug 2022

Nokia

- Implemented logging and a **library that caught 96% of failed deployers** during performance tests for Nokia's Network Services Platform using Locust API and Python
- Optimized configuration of test programs by reducing the number of **JSON config files** needed to run tests **by 95%**
- Eliminated need for manual Network Service management on Nokia's NSP through writing and debugging a **Python program** to automatically create, delete, and unmanage Network Elements using **REST API**
- Worked with **Agile development team** and used project management tools like **Jira** to track development progress

Projects

YouWriter  | React, Flask, Python, MongoDB, OpenAI API, YouTube Transcript API

- Created a web app that **converts YouTube videos into a text summary** in order to facilitate video-based learning
- Extracted and processed video transcript data in a **Flask backend** using **OpenAI API** and YouTube Transcript API
- Implemented **MongoDB login system** and a responsive **React frontend** designed using **Figma**

Timeowt  | JavaScript, Chrome API, HTML, CSS

- Designed and created a cat-themed **Chrome web extension that blocks users from unproductive sites** to eliminate distractions and boost student productivity
- Used **Chrome API and JavaScript** to implement an interactive popup window that enables users to change site blocking settings and store the changes automatically in Chrome's local storage
- Leveraged principles of UI/UX design by creating **Figma design prototypes** and implementing them into the popup and redirect page using **HTML and CSS**

IngredientSafe (Best Health Hack @ LunarHacks)  | Python, HTML, CSS, JavaScript

- Developed an **interactive full stack web app** that automatically scans fine-print product labels and returns potentially harmful ingredients, to help simplify the task of reading labels for the aging and visually impaired
- Combined front-end interface with Python back-end that converts images to text, identifies allergens, and returns them to the user using the **Pytesseract and OpenCV libraries**
- Placed **1st** in international hackathon with **100+ participants**
